Excess over USp times $l = \ln(|D|/\pi)$: nearly constant
(density − USp) × l
$\log_{10}|D|$
B10
C100
D100
E100
ratios conjecture
fit c/l: c = 2.57
G15
G15b
G15c
three bands combined
Beyond the data the descriptions part by orders of magnitude
excess of the density in [0, 1/2] over USp
ratios conjecture (no free parameter)
c/l
power of |D|, exponent -0.062
$3.6 \cdot 10^{21}$
$2.5 \cdot 10^{101}$
$\log_{10}|D|$
